

Enterprise Search Box to Rule Them All

- Search across M365 Outlook, Teams, Sharepoint and OneDrive plus any number of open-source search engines, leading databases and online enterprise services
- Get the most relevant results from all sources, re-ranked by a large language model (LLM) – the core technology behind ChatGPT and other generative AIs
- Enterprise-grade security requires no extraction or movement of data, and all searching is done on behalf of existing, previously permissioned users

The screenshot displays the Swirl Metasearch web interface. At the top, there is a search bar with the placeholder text "What are you searching for today?". To the left of the search bar is a "Select Source..." dropdown menu. To the right are a "SEARCH" button, a "SUBSCRIBE?" toggle, and notification icons. Below the search bar, there are links for "Advanced Search" and "View System Log".

On the left side, there is a "SOURCE" filter panel with checkboxes for "IT News (34)", "Strategy Consulting (61)", and "ZD Net (43)", along with a "Clear All" button. The main content area shows a "Results Summary:" for the search term "Tesla". The source is identified as "ChatGPT". The summary text states: "Tesla is an American company that designs and manufactures electric vehicles, energy storage systems, and solar products. The company was founded in 2003 by Elon Musk, and it is headquartered in Palo Alto, California. Tesla's electric cars are known for their high performance, long range, and innovative features such as Autopilot, which allows the car to drive semi-autonomously under certain conditions. Tesla currently offers several models of electric cars, including the Model S, Model 3, Model X, and Model Y."

Below the summary, there are search controls: "Showing results 1-10 of 58 found in 5477 milliseconds.", "10 per page" dropdown, and pagination buttons for "Prev", "1", "2", "3", "4", "5", and "Next". There is also a "VIEW BY:" dropdown set to "Relevancy" and a "CHANGE LAYOUT:" button with grid and list icons.

The search results are displayed as a list of four items, each with a "NEW" badge and a source link:

1. **Tesla's self-driving technology sets its electric cars apart** (Source: IT News, URL: <http://www.itnews.com/article/what-is-the-best-ev-car-on-the-...>)
2. **Tesla's electric cars are paving the way for a sustainable future** (Source: Strategy Consulting, URL: <http://www.google.com/strategy-consulting/articles/tesl...>)
3. **The future of electric cars: A look at Tesla's plans for expansion** (Source: ZD Net, URL: <http://www.zdnet.com/magazine/article/the-future-of-electric-cars...>)
4. **Tesla's self-driving technology sets its electric cars apart** (Source: IT News, URL: <http://www.itnews.com/article/what-is-the-best-ev-car-on-the-...>)

Spyglass Search UI

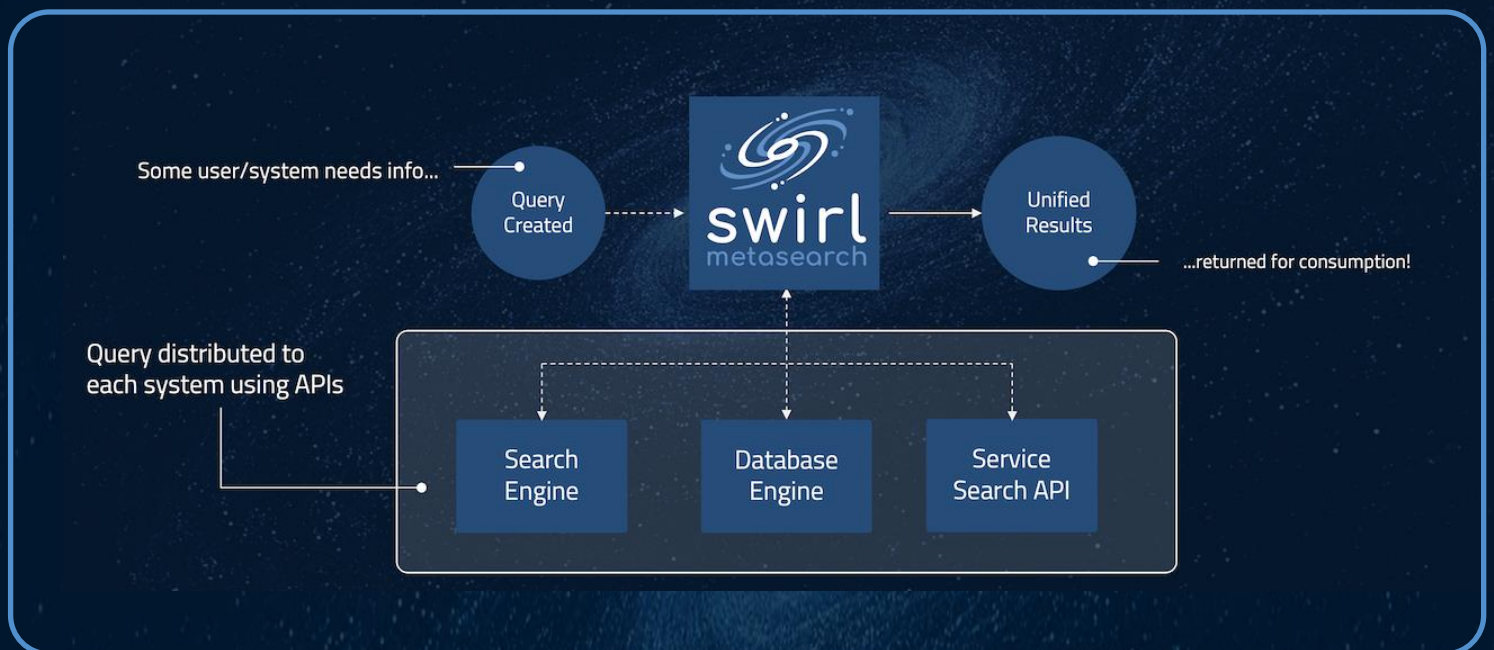

Systematically speed through results from hundreds of sources

Subscribe to any search and receive notifications whenever new results are found

Easily customized to include enterprise colors, fonts and logo

Included Connectors

- M365 Outlook, Teams, OneDrive, Sharepoint
- Atlassian Confluence, Jira; JetBrains YouTrack
- Elasticsearch, Solr, AWS OpenSearch
- PostgreSQL, Sqlite3, Google BigQuery
- NLResearch.com, Miro.com, Generic HTTP

Powerful Enterprise Features

- No-code query API integration using zero/low code
- Pre-query, query, result and post-result processing pipelines
- Query parsing & adaptation and matching on word-stems using NLTK
- Incorporation of source feedback and highlighting of matching terms
- Sort results by date, round-robin or relevancy order
- Duplicate detection by field or similarity
- Subscribe to receive notifications whenever new results are found
- Expiration service can delete stored queries and results for maximum privacy
